Food policy for food management: From excess to export ban

Shroff Sangeeta, Vilhekar Rohini
VAMNICOM, Pune

Online published on 18 December, 2023.

Abstract

The procurement of foodgrains is open ended and the problem of plenty has caused huge fiscal deficit to the country. While caused by covid 19 pandemic and global supply shock enabled the country to unload the foodgrain mountain, the same can happen. Infact, the domestic competitive prices of wheat and rice, pressurized the government to impose export bans. A dyn required to maintain food and nutrition security. Merely increasing MSP of crops cannot put the house in order. In states like of rice and wheat is far higher than that of other crops, thus increasing the net returns of farmers and serving as a disincentiv diversification of cropping pattern. This monoculture of rice-wheat cycle is causing soil degradation, water salinity and deplet The answer thus lies in promoting technology for other crops such as pulses and oilseeds, for which the demand is increasir country lacks self sufficiency. Hence price policy coupled with technology and investment in R&D, can help the country to tra of food and nutrition security.
